

Cell City Analogy

By Shannan Muskopf

In a far away city called Grant City, the main export and production product is the steel **widget**. Everyone in the town has something to do with steel widget making and the entire town is designed to build and export widgets. The **town hall** has the instructions for widget making, widgets come in all shapes and sizes and any sizes and any citizen of Grant can get the instructions and begin making their own widgets. Widgets are generally produced in **small shops** around the city, these small shops can be built by the **carpenter's union** (whose headquarters are in town hall).

After the widget is constructed, they are placed on **special carts** which can deliver the widget anywhere in the city. In order for a widget to be exported, the carts take the widget to the **postal office**, where the widgets are packaged and labeled for export. Sometimes widgets don't turn out right, and the "rejects" are sent to the **scrap yard** where they are broken down for parts or destroyed altogether. The town powers the widget shops and carts from a **hydraulic dam** that is in the city. The entire city is enclosed by a large wooden **fence**, only the postal trucks (and citizens with proper passports) are allowed outside the city.

Match the parts of the city (underlined) with the parts of the cell.

1. Mitochondria _____
2. Ribosomes _____
3. Nucleus _____
4. Endoplasmic Reticulum _____
5. Golgi _____

Apparatus _____

6. Protein _____

7. Cell
Membrane _____

8. Lysosomes _____

9. Nucleolus _____

**** Create your own analogy of the cell using a different model. Some ideas might be: a school, a house, a factory, or anything you can imagine****
